Image Management with Bridge

Bridge is a method of sorting, cataloguing and viewing image files. Here are some of the basic functions possible with Adobe Bridge:

- Images can be rated with a star system or coloured labels (use the Label menu), and then viewed and retrieved in batches according to their labels.
- The panels and content area can be customized to your needs using the View mode.
- Images can be assigned key words (View – Keywords Panel) so images can be cross-referenced and retrieved according to key word searches (Sort – By Label or Edit – Find))
- Contact sheet can be made directly from Bridge using selected images or selected image folders (Select desired images and then go to Tools – Photoshop – Contact Sheet II).
- Images can be viewed as a slide show (View – Slide Show), or in film strip (View – As Filmstrip) or light table modes (Window – Work Space – Light Table).
